Your Spending. Your Genie. Your Control.

A privacy-first personal expense intelligence application

Track • Understand • Improve

Expense tracking should not feel like work

Scattered records

Paper receipts, subscriptions and day-to-day purchases are difficult to reconcile.

Limited visibility

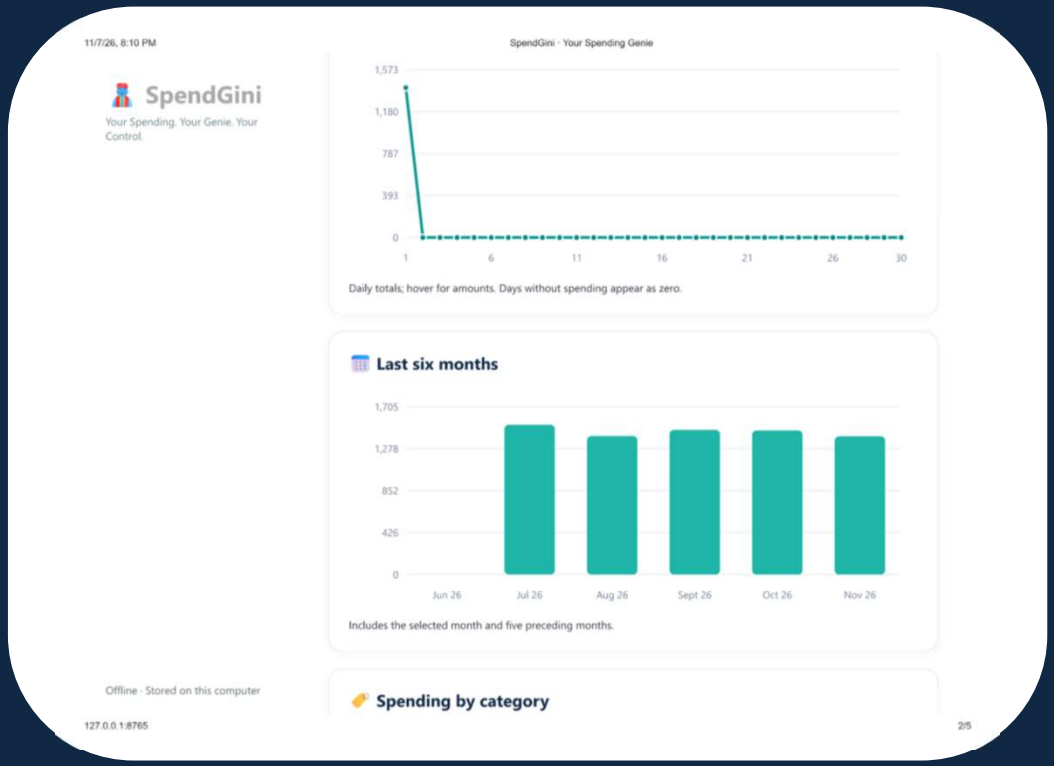

Knowing where money goes often requires manual spreadsheets and repetitive analysis.

Privacy trade-offs

Many finance tools rely on cloud accounts and sharing sensitive spending information.

Design goal: make personal spending understandable without moving it to the cloud.

Meet SpendGini: one local spending workspace

Record

Capture and organize transactions.

Explore

Review trends, merchants and categories.

Ask

Get evidence-backed answers offline.

Five connected capabilities

01 Dashboard

KPIs, charts, alerts and insights

02 Expenses

Add, edit, filter and search

03 Recurring

Schedule upcoming commitments

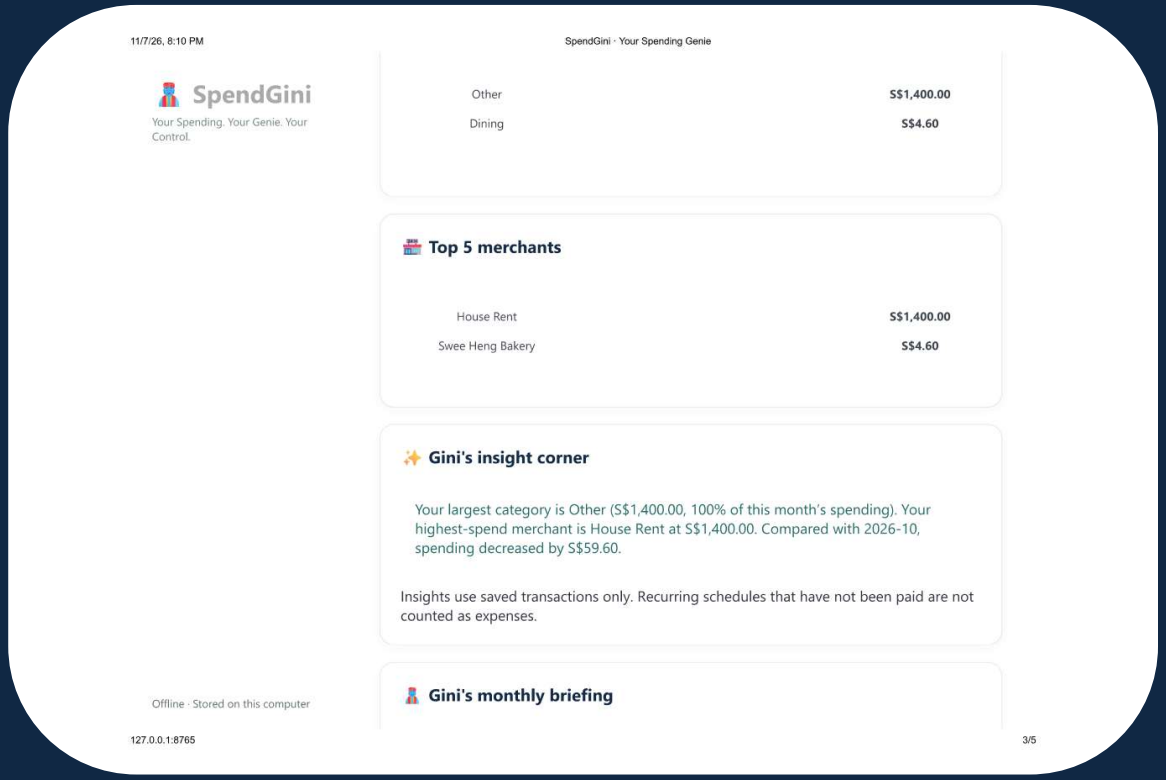

04 Receipt Magic

OCR-assisted receipt capture

05 Ask Gini

Natural-language spending queries

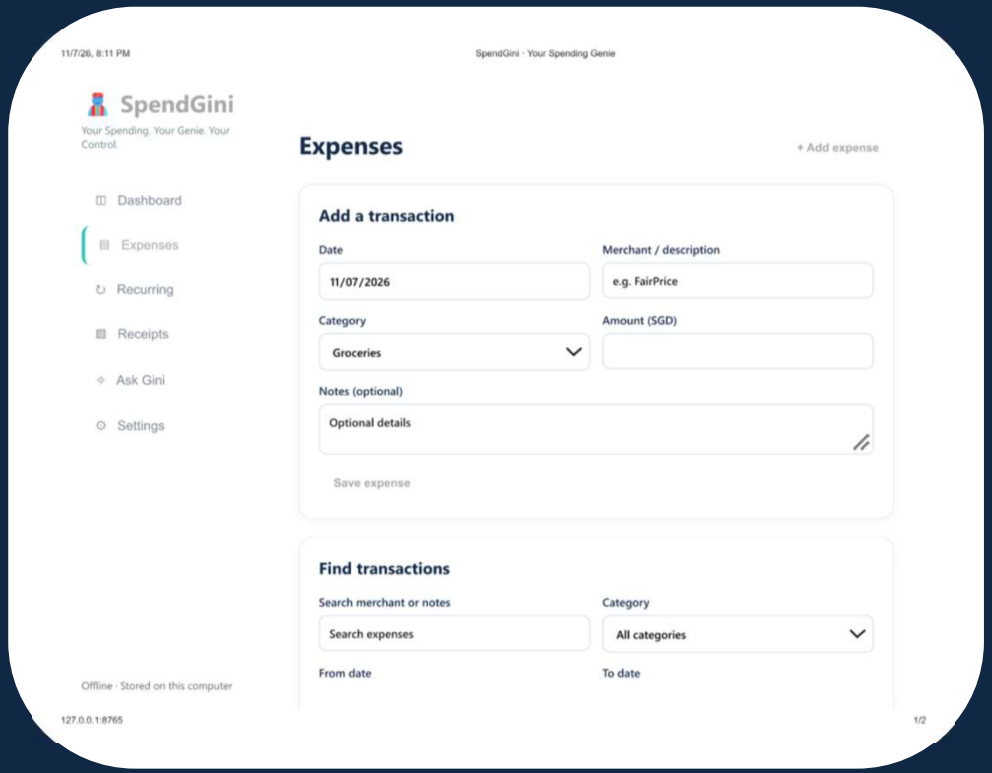

Your financial command center

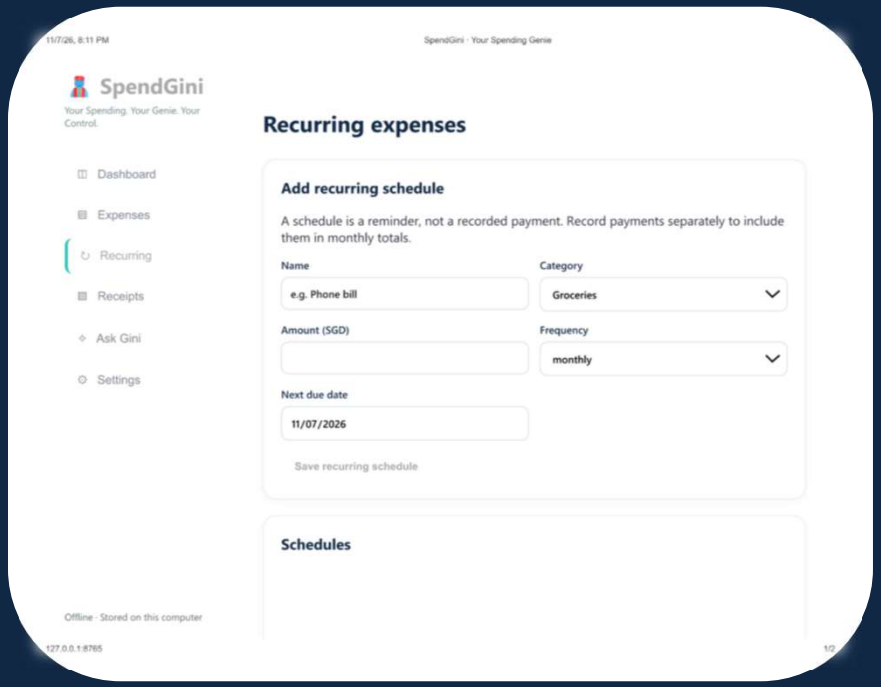

FROM TRANSACTIONS TO INSIGHTS

- Monthly totals and transaction counts
- Daily and six-month spending trends
- Category and merchant breakdowns
- Rule-based briefings and spending alerts

Everyday spending, organized

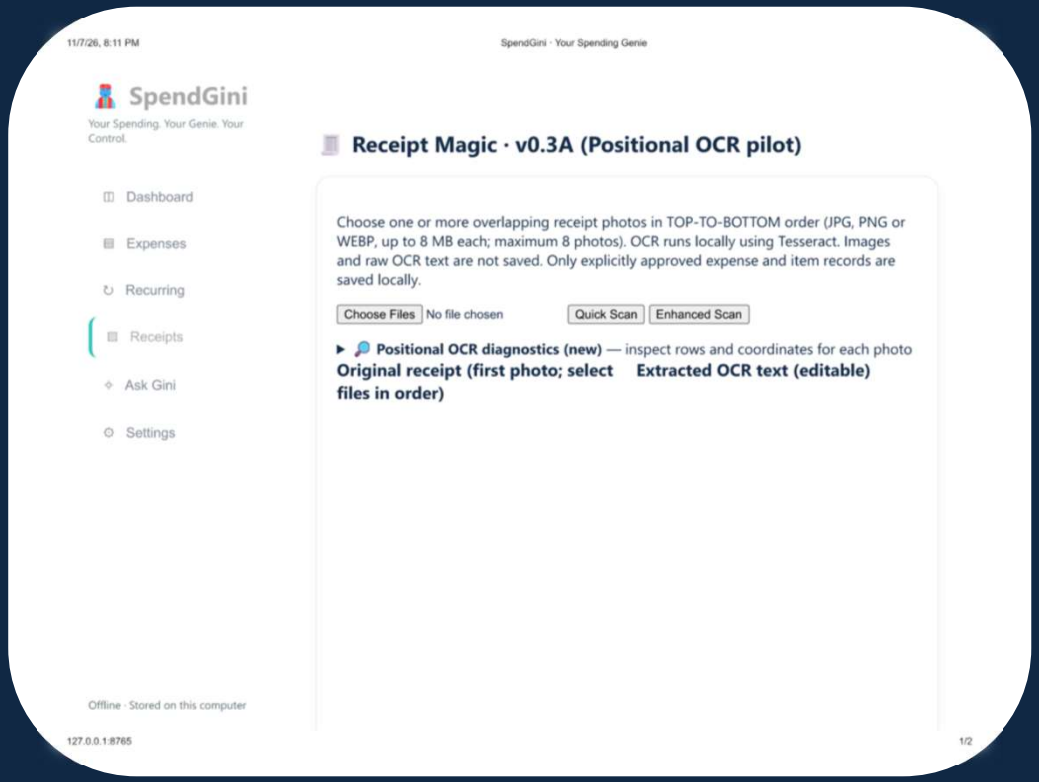

Expenses: record, edit, search, filter and export.

Recurring schedules are reminders—not paid expenses.

Receipt Magic: capture → verify → save

1 Capture

Select receipt photos in order.

2 Review

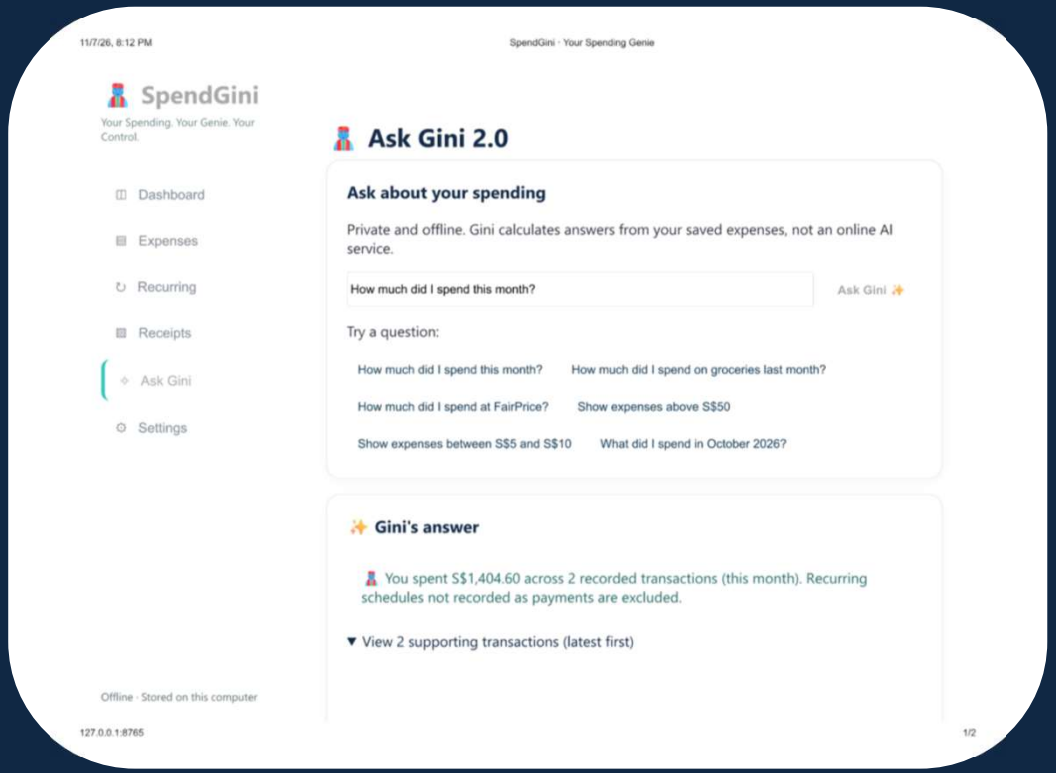

Check OCR text, items and totals.

3 Approve

Save only verified expense records.

PILOT FEATURE • Complex multi-photo receipts still require careful manual review.

Ask Gini: questions answered locally

“How much did I spend on groceries last month?”

Supported questions filter recorded transactions by time, merchant, category and amount.

Deterministic, rule-based engine

No external AI service

Supporting transactions available

Privacy-first by design—not a security guarantee

Local application

Python local server and browser interface on 127.0.0.1.

Local data

SQLite database stored on the user's computer; CSV export available.

Clear limitations

No built-in database encryption or password protection in the pilot version.

Technical stack: Python • HTML/CSS/JavaScript • SQLite • Tesseract OCR

Built to evolve

Available now

Expense tracking, dashboards, recurring schedules, CSV export and supported Ask Gini queries.

Pilot / improving

Receipt OCR, multi-photo reconstruction and extraction accuracy.

Future roadmap

Budget planning, expanded intelligence, packaging and further reliability validation.

SpendGini combines product thinking, analytics, application development and privacy-aware design.
